EXPERIENCE

Turing
Sep 2024 – Present

LLM Python Engineer & Team Lead

- Gave task teams ready-made environments for graded agent evaluation by **leading about 10 engineers** building simulated business applications that AI agents operate over MCP, with seedable state, user permissions, fault injection and per-call audit logs, plus a CLI that verifies and packages each task.
- Broadened LLM evaluation coverage with **15+ runtime input and interaction mutations** in a **benchmark-agnostic framework** with benchmark-specific adapters.
- Made RL Gym evaluations reproducible and auditable by leading its cross-functional quality control and building a Dockerized pipeline and a **deterministic world-state generator** with typed validation and full data lineage. RL Gym combines simulated services and curated tasks through Model Context Protocol (MCP).
- Reduced false positives by **approximately 32% relative to the non-RAG baseline on 500 ground-truth cases** with a local hybrid-RAG bug analyzer using FTS5, FAISS, BGE embeddings and reranking.

Paytm
Mar 2022 – Sep 2024

Senior Data Engineer

- Cut S3 data size by **37%** and saved **about $11,800/month** by integrating Zstandard compression into data storage.
- Saved **$2,100/month** by replacing Debezium with a custom sharded-database ingestion framework for Amazon S3.
- Reduced Spark runtime by **72%** with **44% fewer resources** through automatic partition tuning.
- Cut a separate Spark flow from **12 hours to under 30 minutes** through processing-flow optimization.

Paytm awards: Rising Star (2022) · Technology Star (2023)

Clarivate Analytics
Jul 2021 – Mar 2022

Associate Software Engineer

- Delivered copyright and trademark cataloging functionality through Java backend services and customer-facing JavaScript interfaces and APIs.

SELECTED PROJECT

OpenAI Parameter Golf Challenge · Public submission branch

- Achieved **1.22 BPB (bits per byte) on FineWeb validation** in a non-record submission using 1.58-bit quantization and base-3 weight packing, under a **16 MB artifact and 10-minute training limit on 8 H100 GPUs**.

EDUCATION

Indian Institute of Technology Goa · 2017–2021
Bachelor of Technology in Computer Science

CORE SKILLS

AI & backend: Python, LLM evaluation, MCP, RAG, LangGraph, PyTorch, FastAPI
Data & infrastructure: SQL, Spark, Kafka, Flink, Amazon S3, Docker, GitHub Actions
